

Apple Device Management System (ADMS)

A service to set up your iOS devices (iPod Touch, iPhone or iPad) with the necessary settings, connectivity, security and apps to maximise your investment and get them working to their full potential in the classroom.

- Update all devices to the latest version of the iOS operating system applicable to each particular device.
- Create one or more unique configuration profiles for the devices in your school defining configuration settings to be installed, and restrictions to be put in place on each device.
- Apply first time configuration to all devices making them identical in terms of settings and apps.
- Set up internet access via the schools' WiFi on each device, with internet filtering through the Hertfordshire Grid for Learning.
- Setup software to allow you to locate missing devices (iOS 5 or above only.)
- Install a selection of free apps covering different curriculum areas, in liaison with the school and Chris Carter Apple Education Advisor

Choose our Apple Server Management System for the following features:

- Sync unlimited iPads and Mac machines wirelessly
- Unlimited devices can join the server
- No need to enter proxy settings, we will setup a Proxy Auto Configuration (PAC) to be hosted on the Apple Server or Windows Server.
- Bring your Apple Mobile device to school – you can now control non-school owned Apple mobile devices on your wireless and prevent them from accessing features or web material while using the school wireless
